KALO

KALO · 2026

Your partner in digital transformation.

We create the AI systems, digital solutions and technical infrastructure your organisation needs, whatever its sector or size.

About us

No off-the-shelf products.
We create the right solution.

KALO is a digital transformation partner from Jeddah. We study how an organisation works, then create, build and run the system that solves its problem, whatever the sector.

We create

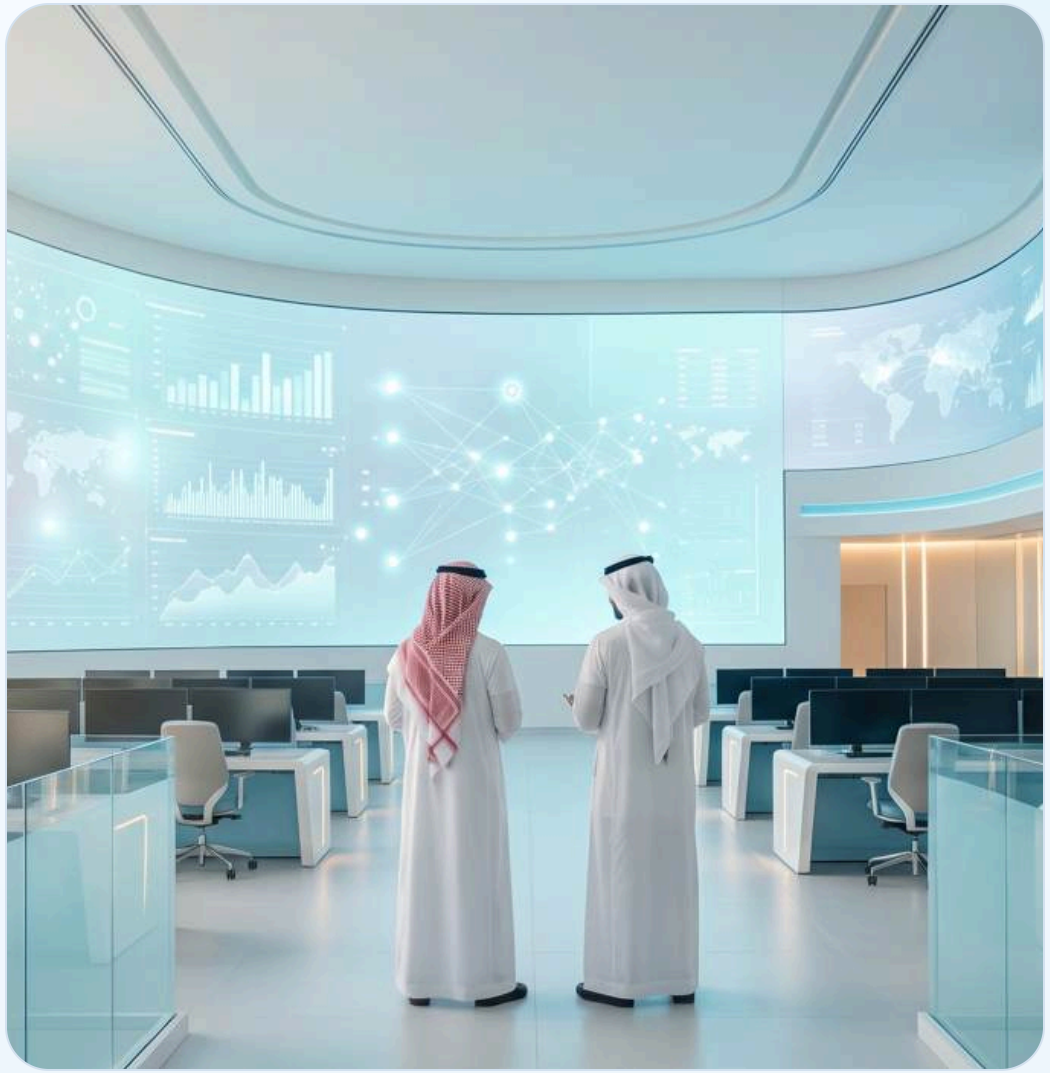

Solutions designed around the problem, not recycled templates.

We deliver

From idea and design through launch and operation.

We commit

World-class standards in security, quality and documentation.

What we build

Four areas.
One solution for each organisation.

AI Systems

- AI agents and employee assistants
- Computer vision and camera analytics
- Predictive analytics and decision models
- Document and Arabic language processing

Digital Solutions

- Web platforms and portals
- iOS and Android apps
- Dashboards and reports
- Stores and booking systems

Automation & Integration

- ERP, CRM and legacy integration
- APIs
- Automated workflows and approvals
- WhatsApp and email channels

Infrastructure & Security

- Cloudflare deployment and protection
- Private repositories and code management
- In-Kingdom hosting when needed
- Monitoring, alerts and operations

Consulting & studies Feasibility studies, market research, digital transformation roadmaps and technical tender specifications.

Sectors

An open market.
Every sector holds a smarter system.

We don't confine ourselves to one field. Wherever a process needs speed, accuracy or visibility, we create the solution.

Government | Enterprises | Hajj & Umrah | Healthcare | Maritime & shipping | Oil tankers | Tracking & fleets

Wholesale | Retail | E-commerce | Infrastructure | Energy & industry | Real estate & construction

Logistics & warehousing | Legal & law firms | Finance & accounting | Insurance | Education & training

Tourism & hospitality | Entertainment & events | Media & marketing | Smart cities | and more...

The following pages show examples of what we build. There is no limit to what can be built.

KALO

Hajj & Umrah

Real-time crowd intelligence.

The challenge Millions of visitors in limited space and time, with decisions made in minutes.

- **Live density reading**
  From cameras and crossing points, with heat maps of every site.
- **Early alerts**
  When any zone approaches its safe limit.
- **Unified operations room**
  Cameras, reports and teams on a single screen.
- **Visitor service in their language**
  A multilingual assistant for guidance and enquiries.

KALO

Maritime & Energy

Ships and tankers, always in view.

The challenge Fleets at sea, high-value cargo, and data scattered across systems.

- **Live tracking**
  Every ship and tanker, and its route, on one dashboard.
- **Deviation alerts**
  When a vessel leaves its route or falls behind schedule.
- **Document automation**
  Bills of lading and reports read and entered automatically.
- **Fleet analytics**
  Fuel use, performance and predictive maintenance.

KALO

Healthcare

Health systems that talk to each other.

The challenge Scattered systems, teams that need information in seconds, and patients waiting.

- **Health system integration**
  Connecting hospital, laboratory and radiology systems.
- **Medical paging**
  Instant team call-outs in emergencies, with confirmation and escalation.
- **Patient experience**
  Booking, reminders and follow-up over WhatsApp.
- **Operational analytics**
  Occupancy, waiting times and load forecasting.

KALO

Commerce & Wholesale

From warehouse to customer, without delay.

The challenge Large inventories, growing orders, and sales and shipping systems that don't talk.

- **Sales linked to inventory**
  Wholesale, retail and online stores in one system.
- **Sales agents**
  A WhatsApp agent that takes and completes orders around the clock.
- **Smart warehouses**
  Counting and tracking with cameras and scanners, plus stock-out alerts.
- **Demand forecasting**
  Purchasing and inventory planned on real data.

KALO

Technical Infrastructure

Cloud infrastructure, secure and scalable.

The challenge Systems that need global speed, protection from attacks, and data that stays under your control.

- **Deployment & protection**
  Cloudflare's global network: DNS, WAF, DDoS protection and Workers.
- **Code management**
  Private GitHub repositories with automated, reversible deployment.
- **AI model integration**
  Claude API, OpenAI API and Gemini inside your systems with scoped permissions.
- **Hosting & monitoring**
  Global cloud or in-Kingdom servers, with round-the-clock alerts.

Platforms & partners

Built on the world's best.
The right fit for every project.

Approved partner

Fynchat
Conversation platform and WhatsApp agents

Cloudflare
Network, protection and deployment

GitHub
Code management and automated deployment

Claude API
Anthropic models for analysis and agents

OpenAI API
GPT models for text and voice

Google Gemini
Multimodal models

WhatsApp Business
WhatsApp business platform

n8n
Automation and workflows

Supabase
Databases and back-end services

Salla
Store apps via the partner portal

Trademarks belong to their owners and are shown to indicate the technologies we build on.

How we work

Four clear stages.
Each one delivers value.

01

Assess

We understand the reality: systems, processes, data and team.

- Opportunity map
- Priorities by impact

02

Design

Documented architecture, clear scope and a defined cost before we build.

- Solution document
- Timeline

03

Build

Delivery in short stages, each tested and handed over.

- Working systems
- Team training

04

Operate & evolve

Continuous monitoring, periodic reports and constant improvement.

- Performance reports
- Support and development

Partnership models

Four ways to work with us.
Chosen to fit your stage.

Defined project

One clear solution: a system, an integration, an app or a study, with agreed deliverables and timeline.

- Best for: a specific need

Best for transformation

Transformation partnership

An extended agreement delivering the roadmap in stages, with a partnership manager and regular reports.

- Best for: organisation-wide change

Dedicated team

A KALO team working as an extension of yours across development, integration and data.

- Best for: ongoing work

Build · Operate · Transfer

We build and run the system, then hand it over in full with training and documentation.

- Best for: major entities

Cost is set after assessment and presented in a separate financial proposal.

Security & governance

Trust isn't an add-on.
It's the foundation.

Secure by design

Least-privilege access, encrypted secrets and audit logs for every operation.

Data sovereignty

In-Kingdom hosting whenever a project requires it, with due regard to the Personal Data Protection Law.

Sensitive data

Patient, customer and contract data isolated and encrypted, with access limited to those who need it.

Camera privacy

On-site processing where possible, face blurring when needed, and defined retention.

Human oversight

Sensitive decisions stay with your team, and every automated action is logged.

Ownership & confidentiality

Code and documentation handed over under the contract, and an NDA before any detailed discussion.

KALO

Let's begin

Let's create your solution together.

One session to understand the challenge, then a clear assessment and roadmap.
